***Allowable Subject Matter***

Claims 1 – 21 are allowed.

As argued, the prior art fail to fairly disclose operating a roll stability control system for an automotive vehicle having a front and rear brake system and a front and rear active anti-roll bar system comprising, among other limitations, a controller coupled to the active anti-roll bar system and a rollover sensing system controlling the anti-roll bar to prevent the vehicle from rolling over in response to a roll attitude signal; the controller further controlling the brake system to reduce a rolling moment of the vehicle and the front and rear brakes in response to a relative roll angle estimate to provide a predetermined tire force vector; the rollover controller further having brake pressure priority logic generating a brake actuator signal in response to the rollover signal, an antilock brake signal, and traction control brake signal.

***Conclusion***
